

EA Profile – Elizabeth Elliott

Elizabeth has been the Enterprise Advisor for Bemrose School since 2019 and has been working closely with Claire Pavitt to support careers-based activities and the careers programme across all year groups.

Elizabeth has a varied background which helps her to apply different skill sets to support this initiative. After gaining a Masters in Chemistry from the University of East Anglia in 2013, she became a recruitment consultant at Shorterm Group (a local engineering recruitment company) hiring engineers for Bombardier Transportation. In 2017, she made the move to work for Bombardier directly as part of their Engineering Graduate Programme and is now in a global role, specialising in Durability and Environmental Conditions.

Elizabeth has been an active STEM ambassador since 2017 and has enjoyed working within the local community to support activities such as CV workshops, mock interview sessions and work experience. She has had part time jobs throughout her education and promotes the importance of such roles to students to gain experience and practise 'softer skills' that are just as important as technical abilities.
